

BALTIC BROWN

STONE TYPE

Granite

FINISH

Polished

ORIGIN

Kymi, Finland

SIZES

12"x12"x3/8"

3/4" (2cm slab)

1-1/4" (3cm slab)

GEOLOGICAL ERA

Proterozoic

(544-2500 million years ago)

RECOMMENDED USES

Commercial & Residential

Interior & Exterior

Floor & Wall

Backsplashes

Countertops

Fireplaces

Tub Surrounds & Showers

Vanities

Baltic Brown is quarried in a bedrock quarry in Kymi, Finland. The size and color of each block is fairly consistent between shipments and, occasionally, the slabs may contain some black biotite crystal spots. The mineral composition of Baltic Brown is 55% Potash feldspar, 25% quartz, 11% plagioclase and 9% biotite and hornblende. During the polishing process, an epoxy resin is applied to the surface of the stone to fill in any natural pits, cracks or fissures that may exist. This does not affect the durability, maintenance or beauty of the stone. It is possible for some of the more minute pits that are too small to effectively hold the resin, to reopen during other finishing stages. However, this will not detract from the overall quality or appearance of the stone. As a natural stone product it is recommended that it be sealed to extend its longevity.

This granite is also known as Baltic Rain or Bruno Baltico.

NSF indicates this product conforms to the requirements of NSF/ANSI Standard 51, thereby meeting the health and sanitation requirements for materials used in areas of food preparation.
